Quick-sort

[Problem](#)[Submissions](#)[Leaderboard](#)[Discussions](#)

Sort a given set of n integer elements using Quick Sort method and compute its time complexity. Run the program for varied values of n > 5000 and record the time taken to sort. Plot a graph of the time taken versus non graph sheet. The elements can be read from a file or can be generated using the random number generator. Demonstrate using Java how the divide - and - conquer method works along with its time complexity analysis: worst case, average case and best case.

Input Format

5 0 0 4 3 1

Constraints

Size of the array should be always positive

Output Format

Depth First Search(DFS)

[Problem](#)[Submissions](#)[Leaderboard](#)[Discussions](#)

Write a Java program to print all the nodes reachable from a given starting node in a digraph using the DFS method.

Input Format

4 6 0 3 2 3 1 2 3 1 2 0 3 0 1

Constraints

number of vertices should be positive

Output Format

DFS of graph : 1 2 3 0

Sample Input 0

```
4  
6  
0  
3  
2  
3  
1  
2  
3  
1  
2  
0  
3  
0  
1
```

Sample Output 0

DFS of graph : 1 2 3 0

[All Contests](#) > [DAA_LAB](#) > Merge-sort 2

Merge-sort 2

[Problem](#)[Submissions](#)[Leaderboard](#)[Discussions](#)

Sort a given set of n integer elements using Merge Sort method and compute its time complexity. Run the program for varied values of n > 5000 and record the time taken to sort. Plot a graph of the time taken versus non graph sheet. The elements can be read from a file or can be generated using the random number generator. Demonstrate using Java how the divide - and - conquer method works along with its time complexity analysis: worst case, average case and best case.

Input Format
